

SE - 305

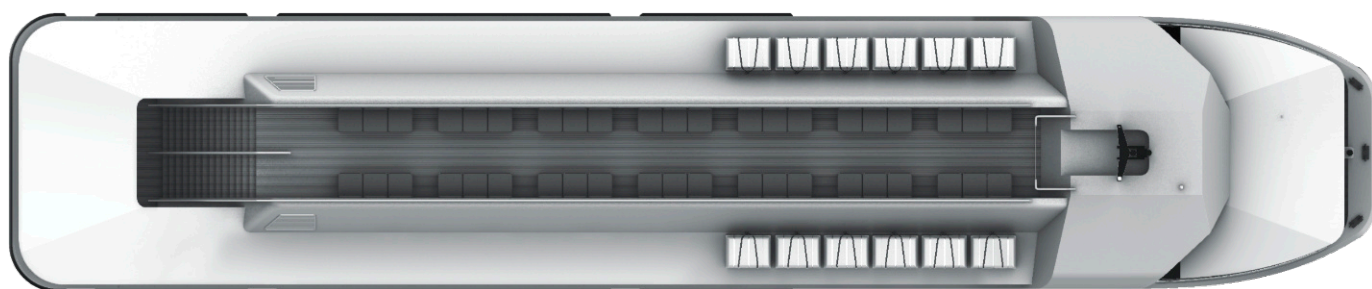

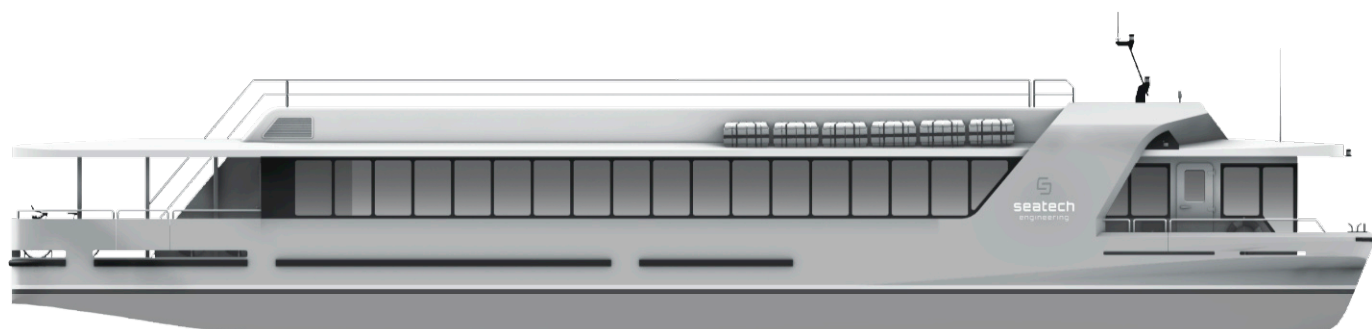

Waterbus

The SE-305 design has modern, neutral character and enables several deck arrangement variants within suitable, zoned space. Places accessible only for a crew and areas available for passengers are separated - both in functional layout and the body of the ship. That guarantees the highest safety and comfort of the journey.

The waterbus is equipped with a hybrid drive. Under the main deck there are electric motors and a generator room. A flat roof space may also be fitted with a solar panels for photovoltaic installation.

The passenger compartment is weather protected and offers direct access to sanitary units. An open upper deck in good weather offers a very attractive perspective on the city. Another important SE-305 feature is dedicated section for a cafeteria included for commercial service offer.

The passengers will be able to leave a number of bicycles at the racks designed at the stern, under the canopy. Moreover 4 convenient luggage boxes offers a place for luggage or baby carriages directly in the main cabin. Some of the seats will be foldable to ensure the comfort of variable space organization, taking into account the needs of passengers with reduced mobility.
